

Freelance data engineer for teams that need pipelines, automation and AI agents that just work.

I help startups and small teams turn scattered data into reliable pipelines, dashboards and LLM-powered workflows — without hiring a full data team. Day job: GTM Engineer at Fello; before that, healthcare data engineering at 99.8% reliability.

SERVICES

How I can help

01 · Data pipelines & ETL

Move data from apps, APIs and spreadsheets into a warehouse you can trust — BigQuery, Postgres, Supabase — with monitoring so you know when something breaks.

02 · AI agents & LLM workflows

Extraction, enrichment and monitoring agents built on Gemini or OpenAI, wrapped in state tracking, retries and validation so they run unattended.

03 · Web scraping at scale

Resolve, scrape and structure tens of thousands of sources with dedup and resumable pipelines — clean output, not a folder of HTML.

04 · Dashboards & GTM data

Looker Studio dashboards, marketing database cleanup, segmentation and lead-quality scoring your sales and marketing team will actually open.

SELECTED WORK

Problems I've solved for real teams

Fello · 2026

100k

Real-estate team scraper pipeline

Resolve ~100k team names to websites, scrape them, and extract team members with Gemini. Per-stage state tracking and dedup schemas mean a failed batch resumes instead of restarting.

Avegen · 2025-26

99.8%

Pipeline reliability across 7 live healthcare apps

GA4/Firebase → BigQuery pipelines and an S3 → DynamoDB data platform powering analytics for seven production apps — built to fail loudly and recover quietly.

v4c.ai · 2024

90%

Alteryx → Dataiku migration accelerator

Teams were hand-porting workflows one by one. I built an accelerator with 10+ reusable components so most of the translation happened automatically. Won a Lamaris Award.

Fello · 2026

0 deletes

ETL config tool for team data

Supabase-backed app with fuzzy search (pg_trgm), Jina Reader scraping in an Edge Function, and a state machine that flags missing agents rather than deleting them.

Avegen · 2023-24

3 → 1

One dashboard for company performance

BigQuery, DataMart and Google Analytics lived in separate tabs. I unified them into a live Looker Studio dashboard with scripts that keep it fresh on their own.

Side project · 2026

Daily

ShipScore — commit ledger dashboard

A GitHub commit-activity dashboard styled like a paper ledger. Built to visualize my streak and make consistent shipping a habit rather than a resolution.

AI AGENTS

Agents that do the boring parts

Extraction agent

Team-member extraction at 100k scale

Gemini reads scraped real-estate sites and returns structured team rosters, validated against a schema before anything lands in the database.

Serper → scrape → Gemini → validate → dedup → Postgres

Stateful update agent

Self-healing team records

A state machine re-scrapes teams via Jina Reader, diffs against known agents, and flags disappearances for review instead of silently deleting them.

schedule → Jina → diff → flag → human review

Monitoring agent

Hiring-update watcher

Polls team pages on a schedule, diffs content, and notifies when a team posts hiring news — so outreach happens the week it matters.

poll → fetch → diff → notify

Agentic systems

Enterprise agents in Dataiku

At v4c.ai, delivered agentic workflows alongside classification and NLP use cases — LLM steps orchestrated inside governed, auditable pipelines.

trigger → plan → tool calls → audit log

EXPERIENCE

Where I've been

Apr 2026 - Now

GTM Engineer · Fello

Remote · Marketing database, GTM workflows, lead quality & segmentation

Feb 2025 - Apr 2026

Data Engineer · Avegen Health

Analytics platforms for 7 healthcare apps, 99.8% pipeline reliability

Jul 2024 - Feb 2025

Associate Data Scientist · v4c.ai

Migration accelerator, Lamaris Award

Dec 2023 - Jul 2024

Data Analyst Intern · Avegen Health

GA4 / BigQuery / PostgreSQL pipelines, DataMart automation

STACK & CERTIFICATIONS

6x Dataiku certified

Languages & data: Python, SQL, Pandas, PostgreSQL, BigQuery, Supabase, DynamoDB, S3

Pipelines & automation: Jenkins, Cron, Edge Functions, Linux, Git, Bitbucket, Jira

Analytics & AI: Dataiku, Looker Studio, GA4, Firebase, Gemini, NLP, Agentic systems
